MOS LED IP

MICROPHONE ONAIR SWITCH

MOS LED IP

Full spectrum RGB + W LED controller

Webbased configuration

IP controlled switching

IP link to Axia Node, Core or TCP server

GPI close contact or 5-15 volt switching

12 and 24 volt standard RGBW ledstrip compatible

12 or 24 volt DC input

Close contact alarm input

The MOS-LED-IP is not just your standard ledstrip controller.

Designed specially for studio use it allows multiple automatic switching on Fader up, incoming telephone call or alarm.

By default the standard GPI close contact or power input can be used for controlling the set colours. The IP link allows not just a webbased configuration but also a direct IP link to an Axia node, QOR, Livewire driver or external TCP server like Pathfinder making hand soldered GPI cables obsolete.

Linked to a COR the MOS-LED-IP will automatically follow the switch of a fader on loading different show profiles. The extra close contact alarm input will overrule when an alarm or doorbell is activated.
